

TCI® Max Shift™ Full Synthetic Transmission Fluid

TCI® unveils Max Shift™ Synthetic Transmission Fluid, the most advanced synthetic fluid available for street and race vehicles

Max Shift™ Full Synthetic Transmission Fluid reduces harmful friction on metal parts and helps deliver faster, more consistent shifts to high performance, heavy-duty and late model transmissions.

Max Shift™ was developed using ultra-pure base oils that resist viscosity breakdown, which boosts durability and extends change intervals. It also includes exclusive friction eliminating, anti-foaming and extreme heat additives so that no other additives or treatments are necessary. The advanced, fully synthetic formula ultimately increases transmission life by improving shift efficiency while reducing harmful friction and lowering operating temperatures.

Engineered for high-performance and heavy-duty applications, TCI® Max Shift™ Synthetic Transmission Fluid gives any automatic transmission maximum performance and durability. As a superior transmission fluid, Max Shift™ exceeds Dexron® II, II-E, III-G, III-H, VI or Ford Mercon® and Mercon® V performance specifications. Because Max Shift™ Transmission Fluids are compatible with most synthetic and conventional transmission fluids, there is no need to flush before adding it. Simply drain existing fluid and pour in Max Shift™ to experience the difference.

Quick Summary

Product: TCI® Max Shift™ Synthetic Transmission Fluid
Part Number #950655 (1 Quart); **#950650** (Case of 12 Quarts)
Features & Benefits:

- Synthetic fluid delivers faster, more consistent shifts, improved durability & extended change intervals for high performance, heavy-duty and late model transmissions
- Full synthetic formula reduces harmful friction, lowers temps & resists breakdown
- Ultra-pure base oils eliminate friction and resist viscosity breakdown
- Includes friction eliminating, anti-foaming and extreme heat additives making other additives and treatments unnecessary
- Exceeds Dexron® and Mercon® performance specs
