

TCI® Max Shift™ Race Transmission Fluid

Dramatically reduce friction and wear on metal and internal transmission components with this premium, mineral-based fluid

Few mechanical components demand more from a lubricant than automatic racing transmissions. The TCI® Max Shift™ Race Transmission Fluid reduces racing transmission internal friction and heat build-up through the use of proprietary additives that cushion the bearing load and impact, thus delivering longer life and durability. This fluid was developed using ultra-pure base oils that resist viscosity breakdown and extend fluid change intervals.

Excellent for high performance street and drag racing applications, TCI® Max Shift™ Race Transmission Fluid is available in both quart and gallon sizes. This highly advanced transmission fluid has the proper ingredients to deliver cavitation resistance for smoother, more reliable operation. Max Shift™ contains exclusive friction eliminating, anti-foaming and extreme heat additives; no other additives or treatments are needed. Max Shift™ is also fully compatible with other brands of mineral or synthetic transmission fluids; exceeds MERCON® & DEXRON® performance specs.

For more information about TCI® Max Shift™ Performance Transmissions Fluid or any other TCI® Automotive product, go to www.tciauto.com or call (888) 776-9824.

Part #950620

Quick Summary

Product: TCI® Max Shift™ Race Transmission Fluid

Part Number: #950620 (1 Qt.); #950610 (1 Case-12 Qts.); #950601 (1 Gal.); #950600 (3-1 Gal. Bottles)

Features & Benefits:

- Fluid reduces friction and wear internal in high performance and drag racing transmission components
- Resists viscosity breakdown and extends fluid change intervals
- Cavitation resistance for smoother operation
- Made from pure base oils that contain friction eliminating, anti-foaming, and extreme heat additives
- Fully compatible with other brands of transmission fluid
- Available in both quart and gallon bottle sizes
- Exceeds MERCON® & DEXRON® performance specs.
